

Series | Special vacuum cups SX

High temperature vacuum cups with felt pad – SX-F

High temperature vacuum cups with felt pad – SX-F

**HEAT RESISTANT
& LOW MARKING**

Product notes

Almost mark-free special vacuum cup for high temperature requirements, e.g. in the glass industry. Special felt pad vulcanized to elastomer carrier. Migration of silicone particles is prevented by vapour-deposited aluminum layer. Connection up to Ø 70 mm by means of plug-in nipple, from Ø 90 mm with bolted bracket plate.

Advantage

- > Temperature-resistant up to 500 °C (932 °F) (SI)
- > Almost mark-free
- > Cost-effective replacement of worn seals

Notes:

There is a small leak at first use resulting from the texture of the special felt, but after a brief period of use this will be significantly reduced by the thickening of the felt layer.
